

WNC Energy Management Policy

WNC adheres to the concept of co-existence with society and the environment and deeply understands that sustainable business operations require balanced development. To this end we have established energy and environmental management goals and are committed to improving energy efficiency, reducing energy waste, and reducing our carbon footprint. Ultimately our goal is to create sustainable value for employees, customers and society. We understand that energy management is crucial to the company's sustainable development and formulate this energy management policy accordingly. We have also introduced the ISO 50001 energy management system in all factories, and are committed to the implementation of the following:

- Compliance with related energy regulations, implementation of improvement measures relating to energy conservation.
- Preferential purchasing of energy efficient products, support for green design and green manufacturing initiatives.
- Improving efficiency of energy use, reducing energy wastage.
- Integration of related resources in the implementation of energy management objectives.
- Continuing to promote and hold energy conservation activities.
- Boost awareness of the importance of energy conservation to employees.
